Why Bollards?

Bollards form the most important element in demarcating and protecting the pedestrian area. Whether it be traditional bollards with a Victorian theme or urban bollards to add security to your landscape, the Watts bollard range provide for all your key landscapes including; city, retail, warehouse and public spaces. By casting urethane over a steel core, we make exceptionally strong bollards that will not shatter on impact and are ideal for ram raid deterrence, protected parking and pedestrian walkways.

Why Polyurethane?

Urethane is the perfect material for urban products. It is strong, durable, lightweight and requires only either zero or minimal maintenance. Urethane cast bollards are non ferrous so they will NEVER rust.
